SILVERSHINE Ceramic White & SILVERSHINE Xenon White Silver-White Metallic Effect Pigments/银白色金属效果颜料

With **SILVERSHINE Ceramic White** and **SILVERSHINE Xenon White**, ECKART introduces new styling options to add innovative verve and individuality to the long-standing white trend. The effect pigments, based on high-quality silver dollars, result in a brilliant combination of metallic white effects.

SILVERSHINE Ceramic White combines the flawless white of porcelain with a subtle metallic sheen. It is ideal for formulations for coating applications that need to express elegance at the highest level.

Always iridescent, always exciting: With **SILVERSHINE Xenon White**, the respective viewing angle and incidence of light define whether the eye perceives a distinctly smooth, silvery-white effect or a metallic blue hue.

The new aluminum pastes, based on high-quality silver dollars, are recommended for solvent-based coating systems with low solids content. The main areas of application are coatings for the automotive industry, sports equipment (e.g. bicycles), consumer electronics, and plastic and glass coatings.
